Firemen's protective gloves made from leather

August Penkert
Technische Leder- und
Kunststoffherzeugnisse

These firemen's gloves are first and foremostly intended for technical operations. In the course of firefighting, i.e. when the gloves are directly exposed to flames, leather shrinks and hardens.

If firefighting is the main intended activity, we would like recommend textile firemen's (protective) gloves, e.g. our FIREDEVIL PREMIUM, FIREDEVIL 911, FIREDEVIL 911 X-Treme and FLASH PRO models.

Technical description

Article no: 215288 / DU

Firemen's protective gloves in accordance with EN 388 (previously EN 659:1996)

- >> palm and the back of the hand are made from a water repellent and heat resistant chrome tanned grain leather (approx. 1.2mm) for optimum tactility
- >> 100 % Kevlar® knitted glove (approx. 65g / pair) as protection against cuts and heat insulation
- >> pulse protector made from leather
- >> knuckle protector made from cell rubber, approx. 5mm thick
- >> inner elastic band on the topside of the hand
- >> 3M reflective stripes (yellow/silver/yellow) diagonally, on the back of the gauntlet
- >> split (hide) leather gauntlet, approx. 20cm long, which is filled with a flame resistant canvas (approx. 400g/m²)
- >> width of the gauntlet can be adjusted by a Velcro closure
- >> karabiner hook
- >> glove is entirely sewn using Kevlar® yarn
- >> overall length approx. 40cm
- >> can be supplied in sizes 9, 10 and 11 (Special sizes are available upon request)
